

# Scientific Claim Investigation

## *Instructions*

- Review your list of 10 scientific claims from earlier in the semester.
- Choose one claim to investigate in more detail.
- Turn in a 1- to 2-paragraph summary of your claim. Elaborate a little more on the perceived basis for the claim and whether or not you think it's valid. See if you can find the same (or a very similar) claim from other sources and include those in the summary. Make sure you list the sources you find for the claims in a way that you could find them again. Remember to include a title block on your assignment.
